

Rmi implementation steps :

1. Create all java files and compile using **javac** command , it will generate **.class** files
2. Generate stubs invoking **rmic AddServerImpl** it will generate **AddServerImpl_Stub.class** file.
3. Copy **AddClient.class**, **AddServerImpl_Stub.class**, and **AddServerIntf.class** to a directory on the client machine.
- 4.. Copy **AddServerIntf.class**, **AddServerImpl.class**, **AddServerImpl_Stub.class**, and **AddServer.class** to a directory on the server machine.
5. Start the RMI Registry on the Server Machine using **rmiregistry**
6. Start the Server using **java AddServer** in new terminal
- 7.Start the Client **java AddClient servername/ip_address 8 9** in new terminal where servername is first argument and 8 , 9 are second & third argument respectively.
